Searched: 188963 seqs, 23686106 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries
Maximum DB seg length 15

Database: a-geneseq35 1:geneseqp

Statistics: Mean 18.538; Variance 60.235; scale 0.308

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PŢ	Pemphigus vulgaris auto-antigens and multiple sclerosis non-self	
PT	antigens - useful in disease treatment, and method for	
PT	identification of other self and non-self antigens implicated in	
PT	auto-immune disease	
PS	Claim 1; Page 38; 58pp; English.	
င္ပ	Pharmaceutical preparations for tolerisation to antigens comprise	
င္ပ	either an isolated human non-collagen or non-myslin basic protein	
ဂ္ဂ	(MBP) polypeptide which is capable of tolerising an individual to an	
င္ပ	autoantigen; or an isolated human pathogen polypeptide capable of	
င္ပ	tolerising an individual to that polypeptide. In both cases, the	
ဂ	polypeptide (whether self or non-self) includes an amino acid	
င္ပ	sequence corresponding to a sequence motif for a MHC class II	
င္ပ	protein, such as HLA-DR, which is associated with a human autoimmune	
င္ပ	disease and which binds to the polypeptide to activate autoreactive	
င္ပ	T-cells in individuals with the autoimmune disease. This peptide is	
င္ပ	derived from the human desmoglein 3 protein (amino acids 97-111)	
ဌ	and is implicated as a self epitope in pemphigus vulgaris. Peptides	
S	derived from the human desmoglein protein are described in w04841-47.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Post-processor removed

PT Microparticle encapsulated nucleic acids - for recombinant
PT expression of proteins e.g. in gene therapy
PS Disclosure; Column 4; 42pp; English.

CC The patent describes a new preparation of microparticles each
CC matrix consists of one or more synthetic polymers having a solubility
CC in water of less than 1 mg/l (e.g. poly-lactic-co-glycolic acid);
CC and at least 90% of the microparticles have a diameter of less than
CC 100 microns. The microparticles are useful for the delivery of nucleic
CC acids to phagocytic cells. In one embodiment the microparticles are
CC closed circular form) includes an expression control sequence
CC operatively linked to a coding sequence, where the expression product
CC of the coding sequence is a polypeptide having a length and a sequence
CC expression product is thus an effective stimulator of an immune
CC expression product is thus an effective stimulator of an immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š

In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is derived from the human desmoglein 3 protein (amino acids 190-204) and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein protein are described in W04841-47.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens.

                                                                                                                                                                                                                                                                         CC A microparticle preparation (MP) has been developed, consisting of CC microparticle preparation (MP) has been developed, consisting of CC (a) a polymeric matrix (PM) consisting of one or more synthetic polymers CC (a) a polymeric matrix (PM) consisting of one or more synthetic polymers CC having a solubility in water of less that 1 mg/l; and (b) an expression CC vector selected from RNA molecules (at least 50% of which are closed CC circles) or circular plasmid DNA (at least 50% of which are supercoiled). CC also described is a MP of at most 20 microns in diameter, comprising: (a) CC a PM; and (b) a NAM comprising an expression control sequence operatively CC linked to a coding sequence, where the coding sequence encodes an CC expression product selected from: (l) a polypeptide at least 7 amino CC acids in length, having a sequence identical to the sequence of: (l) a CC fragment of a naturally-occurring mammalian protein; or (il) a fragment CC a mammal; (2) a peptide having a length and sequence which permits it to bind to an MHC class I or II molecule; and (3) the polypeptide or the CC bind to an MHC class I or II molecule; and (3) the polypeptide or the CC wPS are highly effective vehicles for use in the present invention. The CC material genetic cells. They can be used for gene therapy, e.g. for CC treating genetic diseases, infections or tumours or for downregulating CC an immune response.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Sat May 13 04:53:44 2000; MasPar time 4.32 Seconds 163.716 Million cell updates/sec

Tabular output not generated.

Title:
Description:
Perfect Score:
Sequence: >US-08-991-628-4 (1-15) from US08991628.pep 108 1 TPMFLLSRNTGEVRT 15

Scoring table: PAM 150 Gap 15

Searched: 142080 segs, 47172406 residues

Post-processing: Minimum Match 0% Listing first 45 summaries Maximum DB seq length 15

Database:

pir62 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 27.219; Variance 35.537; scale 0.766

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein 3 protein (amino acids 251-265) and is implicated as a self epitope in pemphigus vulgaris.

                                                                                                                                               Claim 5; Column 112; 59pp; English.
The present sequence is an antigenic epitope from human cadherin-5, which is a Ca2+ dependent cell adhesion protein. Antibodies or fragments that specifically bind the epitope can be used to purify the cadherin, determine its tissue expression and antagonise its ligand/antiligand binding activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 W13139 standard; Protein; 11 AA. MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Sat May 13 04:58:36 2000; MasPar time 4.28 Seconds 165.342 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: >US-08-991-628-5 (1-15) from US08991628.pep 113

Sequence: 1 CECNIKVKDVNDNFP 15

Scoring table: PAM 150 Gap 15

Searched: 142080 segs, 47172406 residues

Post-processing: Minimum Match 0% Listing first 45 summaries Maximum DB seq length 15

pir62 1:pir1 2:pir2 3:pir3 4:pir4

Database:

Statistics: Mean 25.922; Variance 35.935; scale 0.721

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DR WPI; 96-425218/42.

Premphigus vulgaris auto-antigens and multiple sclerosis non-self prince antigens - useful in disease treatment, and method for prince indentification of other self and non-self antigens implicated in pridentification of other self and non-self antigens implicated in pridentification preparations for tolerisation to antigens comprise cliher an isolated human non-collagen or non-myslin basic protein companies of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the compressing an individual to that polypeptide. In both cases, the colypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II protein, such as HLA-DR, which is associated with a human autoimmune colleges and which binds to the polypeptide to activate autoreactive corresponded in human desmoglein 3 protein cated is implicated as a self epitope in pemphigus vulgaris. Peptide is companied from the human desmoglein protein are described in W04841-47.

TITLE OF INVENTION: IDENTIFICATION OF SELF AND NON-SELF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          109

Pr emphigus vulgaris auto-antigens and multiple sclerosis non-self printification of other self and non-self antigens implicated in pridentification of other self and non-self antigens implicated in Pr auto-immune disease

PS Claim 1; Page 42; 58pp; English.

CC Pharmaceutical preparations for tolerisation to antigens comprise claim 1; Page 42; 58pp; English.

CC Pitter an isolated human non-collagen or non-myslin basic protein clather an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the CC sequence corresponding to a sequence motif for a MHC class II correction, such as HLA-DR, which is associated with a human autoimmune colsease and which binds to the polypeptide to activate autoreactive correctles in individuals with the autoimmune disease. This peptide is conditived from the human desmoglein 3 protein carids 762-786; and is implicated as self epitope in pemphigus vulgaris. Peptides corrected from the human desmoglein protein are described in W04841-47.

GENERAL INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                          Query

derived from the human desmoglein protein (amino acids 97-111) and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein protein are described in w04841-47. Sequence 15 AA;		colerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II	either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of	auto-immune disease Claim 1; Page 38: 58pp; English. Pharmaceutical preparations for tolerisation to antigens comprise	antigens - useful in disease treatment, and method for identification of other self and non-self antigens implicated in	WPI; 96-425218/42. Claim 1: Page 2: 7pp: Japanese.
A new peptide is disclosed which contains at least 5 contiguous aming
acids from the sequence val Gly Ile Asp Gln Pro Pro Phe Gly Ile Phe
val Val Asp Lys Asn Thr Gly Asp Ile Asn Ile Thr Ala Ile Val Asp Arg
Val Use present sequence, the peptide not containing more than
50 residues. The peptide combines with anti-interepidermal cellular
antibody. It can be immobilised on a carrier to prepare an absorbent
useful for the treatment of diseases related to anti-interepidermal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-JUL-1996 (first entry)

peptide combining with anti-interepidermal cellular antibody.

anti-interepidermal cellular antibody; autoantibody; adsorben

Synthetic.
                                                                                                             Fused protein recognised by pemphigus vulgaris auto:antibody - useful to treat and diagnose pemphis vulgaris (PV) antigen (Claim 1; Page 7-9; 9pp; Japanese. W07908 represents the human pemphigus vulgaris (PV) antigen extracellular region. The PV antigen is produced in patients with pemphis vulgaris resulting in autoimmune disease. PV is a rare relapsing disease causing suprabasal intra-epidermal bullae (vesicles) of the skin and mucuous membranes, which is fatal if untreated. The PV antigen was fused to a human IgGl hinge region and the resulting fusion protein is useful to treat or diagnose pemphigus vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R93960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-interepidermal cellular antibody-combining peptide - which be immobilised on column to form adsorbent useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cellular antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is the pemphigus vulgaris 130kD antigen. The protein and its encoding DNA may be used in the diagnosis and treatment of pemphigus vulgaris. It is thought that the antigen may be a cell adhesion molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding pemphigus vulgaris antigen diagnostic and therapeutic uses Disclosure; Fig 7; Sopp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human pemphigus vulgaris 130kD antigen.
Pemphigus vulgaris; skin disease: autoantibodies;
keratinocyte cell surface antigen; glycoprotein;
                                                                                                                                                                                                                                                                                                                        Anti-interepidermal cellular antibody-combining peptide - which can be immobilised on column to form adsorbent useful for treating diseases related to the antibody Example 1; Page 4; 7pp; Japanese.

New peptides are disclosed which contain at least 5 contiguous amino acids from the sequence Val Gy Ile Asp Gln Pro Pro Phe Gly Ile Phe acids from the sequence Val Gly Ile Asp Gln Pro Pro Phe Gly Ile Phe Glu Glu (see R93960), the peptide not containing more than 50 residues. The peptide combines with anti-interepidermal cellular antibody. It can be immobilised on a carrier to prepare an absorbent useful for the treatment of diseases related to anti-interepidermal cellular antibody. The present sequence is a specific example of the new peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  R93961

                                                                                   Pemphigus foliaceus antigen-IgG constant region fusion protein - linked through the hinge region used to treat pemphigus foliaceus Claim 1; Page 10-12; 17pp; Japanese.

Claim 1; Page 10-12; 17pp; Japanese.

Claim 1; Page 10-12; 17pp; Japanese.

Chis sequence represents a fused protein recognised by pemphigus foliaceus patient autoantibody which comprises the constant region of IgG linked to the extracellular region of pemphigus foliaceus is antigen protein through the hinge portion. Pemphigus foliaceus is a chronic, generalised, vesicular and scaling skin eruption similar to dermatitis herpetiformis. The pemphigus foliaceus antigen fusion protein is useful to treat pemphigus foliaceus. The antigen is especially administered through an adsorbent upon which the fusion useful for detecting pemphigus foliaceus antibodies which is useful in immunodiagnosis. The fusion protein has little or no side effects.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti-interpidermal cellular antibody-combining peptide - which can be immobilised on column to form adsorbent useful for treating diseases related to the antibody

Example 2: Page 5: 7pp: Japanese.

New peptides are disclosed which contain at least 5 contiguous amino acids from the sequence Val Gly Ile Asp Iln Pro Pro Phe Gly Ile Phe Val Val Asp Lys Asn Thr Gly Asp Ile Asn Ile Thr Ala Ile Val Asp Arg Glu Glu (see R93960), the peptide not containing more than 50 residues. The peptide combines with anti-interepidermal cellular antibody. It can be immobilised on a carrier to prepare an absorbent useful for the treatment of diseases related to anti-interepidermal cellular antibody. The present sequence is a specific example of the new peptides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PT New isolated Helicobacter pylori nucleic acids - used to develop products for the diagnosis, prevention and treatment of infection by PT H. pylori and other Helicobacter species Claims 37, 41; Page 265-266; 339pp; English.

CC Recombinant or substantially pure preparations of H. pylori polypeptides are disclosed, together with the nucleic acids encoding them. In all, CC 97 ORFs are shown. The proteins are variously cell envelope proteins, CC cytoplasmic proteins, secreted proteins or other cellular proteins.

CC Vaccines containing the nucleic acids or proteins are claimed, as are CC probes containing at least 8 nucleotides from the nucleic acid CC sequences. The vaccines are useful for treating or reducing the risk of CC H. pylori infections, and the probes can be used diagnostically for CC detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

H. pylori GHPO 876 protein. GHPO protein; Helicobacter peptic ulcer disease. Helicobacter pylori. WO9843478-Al.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               97 ORFs are shown. The proteins are variously cell envelope proteins, cytoplasmic proteins, secreted proteins or other cellular proteins. Vaccines containing the nuclekt acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (ASTR) ASTRA AB.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    con in the mouse osteoblastic cell in the Mouse osteoblastic cell in Mc3r3-El and from mouse liver tissue, amplified by PCR, and then Mc3r3-El and from mouse liver tissue, amplified by PCR, and then as much common DNA as possible removed by hybridisation between the 2 libraries. Residual El-specific DNA was amplified, inserted into lambda gtl0 and screened by plaque hybridisation. A minibank of 273 E-specific clones was recovered, their inserts amplified and used to screen total RNA from both cell types. One clone specific for El was identified and sequenced. The insert from this clone was used to screen cDNA prepd. from El RNA and the longest posn. insert cloned in pGEM 112f (+) to give pKOT164. This insert was sequenced: it encoded the 796 AA mouse precursor protein (044391/R49730). The osteosarcoma to identify 2 clones encoding the 2 human precursor proteins - OSF-4-1 and OSF-4-2 (044392/R49731 and 044393/R49732).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T 12

Residual E1-specific DNA was amplified, inserted into lambda gt10 and screened by plaque hybridisation. A minibank of 273 E-specific clones was recovered, their inserts amplified and used to screen total RNA from both cell types. One clone specific for E1 was identified and sequenced. The insert from this clone was used to screen cDNA prepd. from E1 RNA and the longest posn. Insert cloned in pGEM 112f (+) to give pKOT164. This insert was sequenced; it encoded the 796 AA mouse precursor protein (044391/R49730). The insert was also used to screen a cDNA bank prepd. from human precursor proteins - OSF-4-1 and OSF-4-2 (044392/R49731 and Q44393/R49732

CC cDNA libraries were constructed from the mouse osteoblastic cell
CC cDNA libraries were constructed from the mouse osteoblastic cell
CC line MC3T3-El and from mouse liver tissue, amplified by PCR, and
CC then as much common DNA as possible removed by hybridisation between
CC the 2 libraries. Residual El-specific DNA was amplified. Inserted
CC into lambda gtl0 and screened by plaque hybridisation. A minibank of
CC 273 E-specific clones was recovered, their inserts amplified and
CC used to screen total RNA from both cell types. One clone specific
CC for El was identified and sequenced. The insert from this clone was
CC used to screen cDNA prepd. from El RNA and the longest posn. insert
CC cloned in pGEM 112f (+) to give pKOT164. This insert was sequenced;
CC insert was also used to screen a cDNA bank prepd. from human
CC osteosarcoma to identify 2 clones encoding the 2 human precursor
crophore by the procursor conteins of the conteins

They are glycosylated integral membrane proteins that have an N-terminal extracellular domain that determines binding specificity, a hydrophobic membrane spanning region and a C-terminal cytoplasmic domain, which is highly conserved among members of the superfamily. The C-terminal domain interacts with the cytoskeleton through eatenins and other cytoskeleton-associated proteins. The novel cadherin proteins may be used in the analysis of the cadherin proteins in various cancers. Sequence analysis of the cadherin proteins also allows investigation of the structure and function of cadherin. The cadherin proteins may be isolated by using anti-cadherin antibodies. These antibodies may also be used to modulate the activity of cadherin and to determine the tissue specific distribution of cadherin proteins. Each subclass of cadherins has a unique tissue distribution
                                                                                                                                                                                      respectively).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (FARH) HOECHST JAPAN

Title: >US-08-991-628-2
Description: (1-15) from US08991628.pep
Perfect Score: 105

Sequence: 1 FGIFVVDKNTGDINI 15

Scoring table: PAM 150
Gap 15

Searched:

142080 seqs, 47172406 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir62 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 26.968; Variance 38.706; scale 0.697

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Release 3.1A John F. Collins, Biocomputing Research Unit. Copyright (c) 1993-1998 University of Edinburgh, U.K. Distribution rights by Oxford Molecular Ltd

Run on: MPsrch_pp protein - protein database search, using Smith-Waterman algorithm Sat May 13 06:58:15 2000: MasPar time 99.86 Seconds 4.575 Million cell updates/sec

Description: Perfect Score: Sequence: Title: >US-08-991-628-2 (1-15) from US08991628.pep 105 1 FGIFVVDKNTGDINI 15

Tabular output not generated.

Scoring table:

PAM 150 Gap 15

Post-processing:

83857 segs, 30454973 residues

Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 1:swissprot

Statistics: Mean 27.553; Variance 34.618; scale 0.796

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Natl. Acad. Sci. U.S.A. 88:4796-4800(1991).

-: FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS.

-: INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEL FILAMENTS MEDIATING CELL-CELL ADHESION.

-: SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-: TISSUE SPECIFICITY: EPIDEMNIS, TONGUE, TONSILAND ESOPHAGUS.

-: DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS

"Complete amino acid sequence of the epidermal desmoglein precursor polypeptide and identification of a second type of desmoglein gene."

EUR. J. Cell Biol. 55:200-208(1991).

-!- FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS.

INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL ADHESION.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN (BY SIMILARITY).

-!- TISSUE SPECIFICITY: ALL OF THE TISSUES TESTED AND CARCINOMAS.

-!- DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schaefer S., Koch P.J., Franke w., "Identification of the ubiquitous catalogue of the desmo

                                                                                                                                             desmosomal glycoproteins 2 and 3 (desmocollins) in MDCK cells.";

Cell Sci. 96:239-248(1990).

FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS. INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL ADHESION. MAY CONTRIBUTE TO EPIDERMAL CELL POSITIONING (STRATIFICATION) BY MEDIATING DIFFERENTIAL ADHESIVENESS BETWEEN CELLS THAT EXPRESS DIFFERENT ISOFORMS. LINKED TO THE KERATINIZATION OF EPITHELIAL TISSUES.

TO THE KERATINIZATION OF EPITHELIAL TISSUES.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: TWO FORMS; LADG2 (SHOWN HERE) AND 1B/DG3; ARE PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: EPIDERMIS AND WEAKLY IN TONGUE PAPILLAE.

DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS

INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL ADHESION. MAY CONTRIBUTE TO BEIDERMAL CELL POSITIONING (STRATIFICATION) BY MEDIATING DIFFERENTIAL ADHESIVENESS BETWEEN CELLS THAT EXPRESS DIFFERENT ISOFORMS. LINKED TO THE KERATINIZATION OF EPITHELIAL TISSUES.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. ALTERNATIVE PRODUCTS: TWO FORMS; 1A/DG2 (SHOWN HERE) AND 1B/DG3; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: STRONGLY EXPRESSED IN EPIDERMIS, LESS IN LYMPH NODE AND TONGUE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS (POTENTIAL).
